

EXECUTIVE PERFORMANCE REPORT: GLOBAL E-COMMERCE INSIGHTS

Date: June 1, 2026

Analytical Tools: Excel, MySQL, IBM Cognos Analytics

Data Analyst Portfolio Project

1. EXECUTIVE SUMMARY

This enterprise intelligence report evaluates international transactional records to isolate core optimization corridors within digital workflows. By establishing a robust relational database pipeline and executing systematic data transformations, primary financial and operational metrics were mapped to feed an executive-ready business intelligence dashboard.

2. DATA PROCESSING PIPELINE & METHODOLOGY

- **Data Ingestion & Cleansing:** Raw data fields were audited via Microsoft Excel and migrated to a MySQL database. Dates stored as strings were dynamically parsed using structural pattern queries into database-native DATE formats to unlock advanced time-series querying.
- **Querying & Export:** Advanced SQL aggregation queries were deployed to extract core business metrics.
- **Visualization:** The refined dataset was exported to IBM Cognos Analytics to develop a fully interactive executive presentation layer.

3. CORE ANALYTICAL FINDINGS

- **Category Health:** While the business moves massive inventory within "Furniture" (\$256,274.68), operations should heavily incentivize "Clothing & Accessories" expansion due to its superior profit yield efficiency (37.64% margin).
- **Geographic Performance:** North American markets form our primary demand core, led sequentially by Mexico (203 unique distribution orders) and the United States (196 unique distribution orders).
- **Transactional Gateways:** Digital payment processors (Credit Cards and PayPal) make up the vast majority of checkout touchpoints across all customer segments (Consumer, Corporate, and Home Office).

4. STRATEGIC RECOMMENDATIONS

- 1. Shift digital marketing spend toward high-margin sub-categories within Clothing and Technology to maximize ROI.**
- 2. Establish strategic shipping hubs focused on the Mexico-US corridor to optimize delivery times and reduce logistics overheads.**
- 3. Introduce loyalty programs targeting Credit Card users within the Corporate segment to lock in high-value repeat purchases.**
